Accessories

Aqualisa bar valve accessories have been designed with the installer in mind, packed full of innovative features to simplify installation and deliver a great performance. These accessories are compatible with Midas bar valve shower systems, and come with a 2 year manufacturer's guarantee.

Exposed pipe fittings

Midas 100, 200 and 300 bar valve showers offer the option of exposed pipe fittings that enable the products to be fitted to rising or falling exposed pipework.

Flow regulators

Aqualisa bar valve showers are available with a choice of regulators that limit flow to 6, 8, 9 and 12 litres per minute. Ideal for reducing water consumption, running costs and meeting the criteria set out in Part G of the Building Regs.

Bar valve fixing kit – BAR001FIX

This universal bar valve fixing kit has been designed to simplify installation, and minimise the risk of damage to tiles – to create the perfect finish!

Concealed easy fit fixing bracket – MD300EFB

The Midas easy fit fixing bracket enables multiple fixing options for an easy, flexible installation solution. Strong and light, no matter what the job presents, the fixing bracket can provide the answer.

Harmony shower heads

Combining contemporary looks with great functionality, the new Harmony shower heads are featured with Midas 100 and Midas 200 product ranges. Designed to deliver an uncompromising showering experience from both high and low pressure systems, Harmony is packed with thoughtful, user friendly features.

Optimising your shower

The cleverly designed spray patterns deliver a concentrated and fuller spray for a satisfying showering experience, even with low pressure water systems.

Easy clean nozzles

Harmony's rub clean nozzles are designed to make cleaning and limescale removal easy, reducing the need for chemical de-scaling, and maintaining shower performance.

Water saving

Harmony's 'eco' spray setting, on mixer showers, is capable of delivering up to 25% water saving, without compromising the showering experience.

Anti-twist hose connection

A thoughtfully designed anti-twist mechanism allows the shower head to swivel independently from the hose to avoid twisting, maintaining performance and extending the life of the hose.
